# Champion: the winning basic ring

The all-rounder of the R+F team:

Champion quality, „Made in Germany“. High-quality rings made of fine-grained ball-bearing alloy steel 100Cr6, developed for optimum long-term efficiency in spinning and twisting.

The special characteristic of these rings is their microfine surface structure that creates a smooth running surface. The formation of the required fibre-lubricating film for quality ring spinning remains for years even with frequent article changes. Your spinning processes benefit from flexibility of use, service life and constant yarn quality from spindle to spindle.

## 360° R+F Performance

Variants of the rings are: Flange 1/2, 1 and 2 with different profiles, as BEF-, A or Varius-ring with or without centering plate.

Contact your R+F representative for further information and technical specifications or any R+F innovations.
